

Install Dynamic Login Pages

Background

- The Dynamic Login Page is a mobile first login page.
- The following captive portals are supported:
 - CoovaChilli
 - Mikrotik
- Our pages are Webix based.
- You can discover more about the Webix library here: <http://webix.com/>

Install instructions

- Check out the latest code of the dynamic login pages under the `/usr/share/nginx/html` directory:

```
cd /usr/share/nginx/html
sudo svn checkout
svn://dvdwalt@svn.code.sf.net/p/radiusdesk/code/trunk/login ./login
```

If you are following the development of RADIUSdesk and want to make sure you have the latest SVN you can simply cd to `/usr/share/nginx/html/rd_login` and run **svn update** to fetch the latest changes.

Configuration instructions

- We can instruct RADIUSdesk which pages should be served.
- This is specified in a configuration file.
 - The file is located at `/usr/share/nginx/html/cake3/rd_cake/config/DynamicLogin.php`
- See the following snippet from the file:

```
$config['DynamicLogin']['theme']['Default'] = array(
    'coova_desktop'      => '/login/cp/index.html',
    'coova_mobile'      => '/login/cp/index.html',
    'mikrotik_desktop'  => '/login/cp/index.html',
    'mikrotik_mobile'  => '/login/cp/index.html',
);
```

- By simply changing the **'active'** entry, RADIUSdesk will redirect to that specified login page.

Preview

- You can preview the login pages by going to the following URLs.
- **Please substitute the DNS name with your own server's one:**

CoovaChilli and Mikrotik

- Desktop: http://rd01.wificity.asia/login/cp/index.html?dynamic_id=3
