

Dynamic Login Pages Overview

Consider the above diagram.

Introduction

Dynamic Login Pages are the custom welcoming page when users connect to the Hotspot. You can create a login page with custom user fields, themes and graphics. Dynamic Login Pages provides an easy and central way to manage login pages for CoovaChilli and Mikrotik Captive Portals.

Features

- Supports both **CoovaChilli** and **Mikrotik**.
- Automatic device detection. Mobile devices get a **mobile friendly login page**.
- Option to **accept T&C's** before connecting.
- Includes a **gallery, logos, contact information** and **help text**, all sourced from RADIUSdesk's Dynamic Login Pages utility.
- Also includes a **Click-To-Connect** option. To enable Click-To-Connect, you have to create a Permanent User first to use as the Click-To-Connect username, password and Profile.
- As an example, you can set the Profile to:
 - Give them a once-off **free** data bundle
 - Give them a **daily** data allowance

- Give them an allowance that is reset at an interval you choose e.g. every 3hours. This is ideal for a coffee shop.
