

# White Label an Install of RADIUSdesk

- We realized there are by now quite a few deployments of RADIUSdesk out there.
- Some of these deployments require **White Labeling**.
- If you want to **White Label** your install then this page is for you.

## Change the location from where the pages are served

- Traditionally the optimized pages are served from the **/usr/share/nginx/html/rd/build/production/Rd/** directory.
- Do the following to serve it from the **Webroot**.

```
sudo cp -R /usr/share/nginx/html/rd/build/production/Rd/*  
/usr/share/nginx/html/
```

## Change the login screen

- The login screen does not know who is about to log in so you can not give user related feedback.
- Remember by changing the **license message does not free you** from the obligations imposed by the GPL license under which this software is released.

```
sudo vi /usr/share/nginx/html/resources/js/config.js
```

- Look for the following lines and change according to what you require

```
headerName      : 'RADIUSdesk',  
footerName      : 'RADIUSdesk',  
footerLicense   : '2012-2017 GPL license',
```

- Reload the page.
- It should now reflect the changes.

- We assume you copied the optimized files to be in served out of the **Webroot** as specified in the first step of this page.
- If you want to change it in its default location.
  - For the optimized JavaScript code:

```
sudo vi  
/usr/share/nginx/html/rd/build/production/Rd/resources/js/config.js
```

- For the original JavaScript code:

```
sudo vi /usr/share/nginx/html/rd/resources/js/config.js
```

## Change the Page Title

- The default page title is **Rd**.
- To change that to something else do the following:

```
sudo vi /usr/share/nginx/html/index.html
```

- Look for the following and change to your liking.

```
<meta name="viewport" content="width=device-width, initial-scale=1, maximum-
scale=1, user-scalable=no">
<title>Rd</title>
```

## After you logged in

- After you logged in you can specify site wide defaults for the banner and footer.
- Edit the following file

```
sudo vi /usr/share/nginx/html/cake3/rd_cake/config/RadiusDesk.php
```

- Look for the following and edit to your liking.

```
//=== White Label ===

#NOTE: To enable the White Label site wide; change this to true
$config['whitelabel']['active'] = false ;

#After it is enabled you can tweak these values
$config['whitelabel']['hName'] = 'RADIUSdesk';
$config['whitelabel']['hBg'] = '#FFFFFF';
$config['whitelabel']['hFg'] = '#4b4c4c';
$config['whitelabel']['imgActive'] = true;
$config['whitelabel']['imgFile'] = 'logo.png';
$config['whitelabel']['fName'] = 'RADIUSdesk';
```

- The **logo.png** file resides in the **/usr/share/nginx/html/cake3/rd\_cake/webroot/img/access\_providers/** folder.
- If you want to specify a site wide default logo, please replace that one manually.
- The logo should not be more than 50 px high for it to display nicely in the top banner.

## Per Access Provider

- We also added functionality per Access Provider to override the default White Label settings.
- Simply open the **Access Providers** applet.
- Select an Access Provider and Edit it.
- The **Detail** will have a **White Label** sub-tab where you can specify the overrides.

Remember that the **per Access Provider** override require that the site's white label be enabled in order to be activated.
